

Qfinity™

Introducing the Qfinity reusable autoinjector that works simply and simply works.

Enhance Your Portfolio

The Qfinity™ autoinjector platform enables the delivery of your injectable therapies in a versatile platform solution at a cost per injection up to 65% lower than market leading disposable autoinjectors. Featuring a simple spring-loaded, reusable drive unit and a small single-use, pre-assembled cassette with 1.0-ml and 2.25-ml pre-filled syringe sizes, the modular, mechanical autoinjector allows you maximum flexibility to choose the right solution for your target patient population across a range of dosing volumes.

Meet Your Sustainability Goals

Offered as a reusable mechanical drive autoinjector, the Qfinity platform provides the optimal solution balancing convenience, ease of use and safety with a more sustainable medical device.

The combination of a single drive unit providing over 100 injections over its lifetime, plus the reduced use of plastics and metals results in an estimated 65% reduction in cost per injection. It also achieves the following sustainability metrics:

Greater than 60%
reduction in carbon footprint

50% smaller
manufacturing footprint

70% reduction
in CAPEX

Connect to Your Patients with the Qfinity+ Platform

Designed with the patient in mind, Jabil also offers the Qfinity+ connected platform in an identical form factor to the standard Qfinity version. The Qfinity+ platform supports a seamless path to connected care without burdening the patient or those who care for them.

For the user, the connected version delivers an easy experience with only the addition of the connected Home Hub for automatic data transfer and charging. The patient simply uses the device and places it back onto the Home Hub which then manages the data transfer from the device automatically, without any need for interaction by the patient. There is no requirement for the user to own a smart phone thereby significantly broadening access. The Qfinity+ Platform makes remote monitoring of adherence and compliance in long-term patient care and clinical trial applications easy—for program managers, care teams, and patients.

Lower Your Costs

The Qfinity+ platform is offered at an up to 20% savings per injection compared to the market-leading, unconnected disposable autoinjector. As a leading healthcare manufacturing partner, Jabil offers efficiencies of scale and a global manufacturing footprint which also helps mitigate supply chain risks.

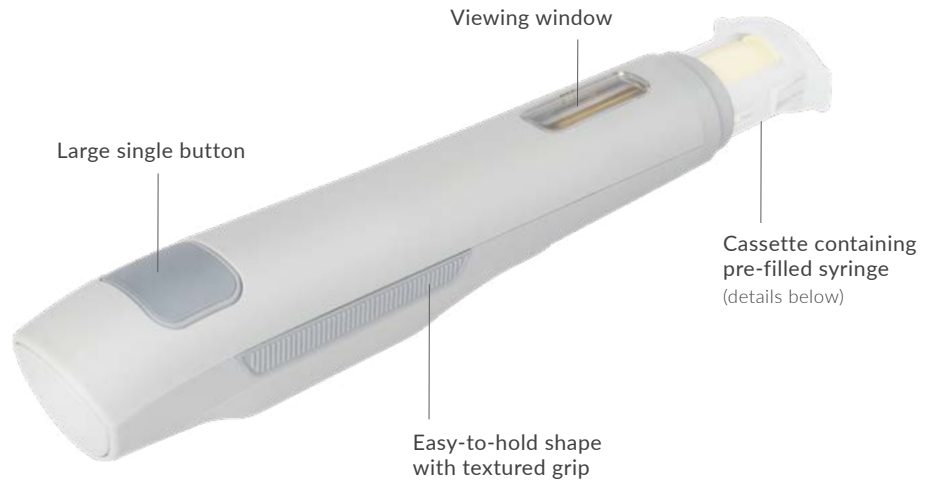

The Qfinity Autoinjector Platform

Trusted by dozens of top medical brands, Jabil Healthcare will help you get to market fast with the simple, sustainable Qfinity platform – ready for new drug formulations and the connected future of healthcare.

Autoinjector

- Reusable
- Spring-driven mechanical drive unit
- Same form factor for Qfinity and Qfinity+

Cassette with Pre-filled Syringe

- Disposable
- 1 mL & 2.25 mL variants available
- Viscosities to 30 cP

Qfinity+

Home Hub for the Qfinity+ Platform

- Automatic data transfer
- Integrated cellular communications
- No smartphone or Bluetooth required
- Integrated electronics function remotely to record dosing events for 14 days or more between charges

Jabil, Inc. is comprised of 200,000+ people in more than 100 facilities around the globe, working every day to be the most technologically advanced and trusted manufacturing solutions provider. At Jabil Healthcare, the Jabil division dedicated exclusively to healthcare, we are working with customers to design, develop and manufacture some of the most complex and innovative drug delivery devices on the market today.
