

Jabil's Qfinity+™ Transforms Clinical Trials

Integrate Qfinity+ into clinical development as a powerful tool for conducting decentralized studies with real-time, data-driven engagement delivering the most informed and actionable insights possible.

Qfinity+ Answers

Did the participants take their medicine as directed? Did they dose properly?

Gain an edge on uncertainty and protect your investment when you partner with Jabil on a reusable drug delivery device that supports adherence and compliance while minimising participant burden.

Qfinity+ helps identify and actively engage those few participants who are struggling to comply with study protocols, improving safety and efficacy while meeting enrollment timelines.

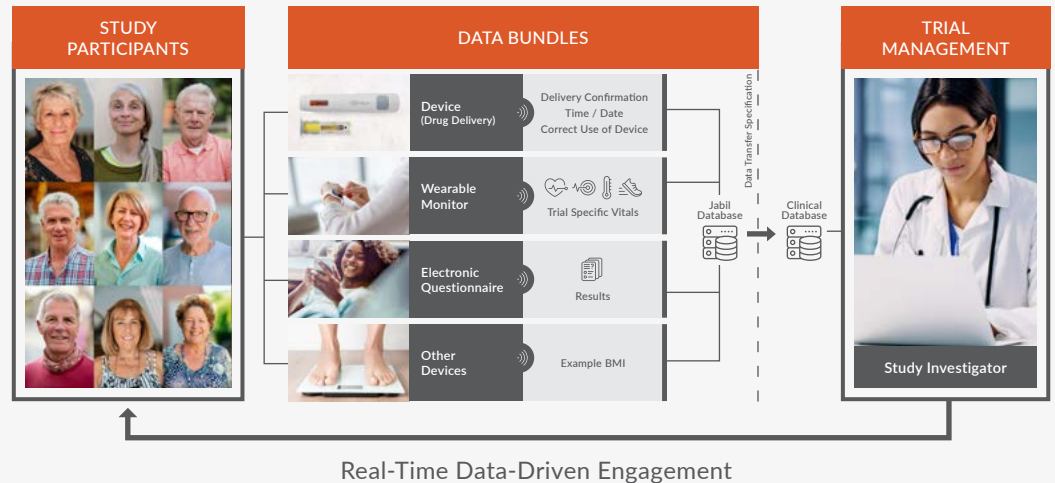

User-Centric Design

The Qfinity+ Home Hub enables both connectivity and charging, independent of smartphones, by virtue of universally available cellular communications.

No need to pair a separate device; no additional user steps or training is required. Simply put Qfinity+ back in the Home Hub cradle for seamless data transmission and automatic device charging.

Digital Monitoring Platform with Qfinity+

Benefits

Empowers study investigator to focus on those participants who struggle to follow the study protocol

Reduces study costs through improved patient retention, adherence, compliance, and persistence

Accelerates clinical development & time-to-market per smaller and shorter studies

Enables more effective study execution through data-driven participant engagement testing the scientific hypothesis

Enables better informed decision making at key investment milestones through real-time insights on patient recruitment and study timelines

Supports decentralised and hybrid clinical trial models and integrates seamlessly with existing business processes
