

Jabil Smart Meters Solutions – Building a Sustainable Tomorrow, Today

With over 17 years in the market and more than 150 million Jabil-manufactured smart meters operating in the world today, Jabil is delivering technological and innovative solutions to all the leading brands within the Smart Grid industry. This extensive experience makes up approximately 50% of meters worldwide that contain Jabil-manufactured electronics. With decades of manufacturing and supply chain experience in Brazil, Mexico, Poland, Russia, China, and Vietnam, Jabil has emerged as a strategic solutions partner for OEMs looking to accelerate time-to-market and expand in emerging markets. With Jabil's global footprint of over 90 sites on four continents, customers can scale manufacturing to support growth requirements in every part of the world.

Today, Jabil is supporting the design and manufacturer for the entire smart meter ecosystem, which reduces the risk for interoperability issues. As an end-to-end solution provider, we deliver hardware, firmware, and mechanical design, plus prototype, testing, validation, and verification for meters and smart grid devices. Through the years we have also partnered with our end customers' energy providers to better understand their requirements and deliver key solutions.

From design and fabrication through testing and an intelligent, digital supply chain that ensures customers build in the right location at the right cost, Jabil delivers technological and innovative solutions for the smart meter market – building a sustainable tomorrow, today.

Customer Benefits

- Faster time-to-market
- Reduced logistics costs
- Higher product quality and reduced exposure to liabilities
- Single point of accountability for product quality and delivery
- Better allocation of capital
- Fewer interoperability issues
- Reduced risk

Jabil Capabilities

- Meter and sensor testing
- Ultrasonic sensors for gas metering
- Telecommunications and connectivity expertise: RF, HMI, WiFi, and ZigBee
- Risk reduction with intelligent supply-chain management
- Manufacturing agility and scale
- Design with vertically integrated mechanics and plastics solutions
- High-level assembly
- Designed HMI platforms
- Direct experience with virtually all major utilities such as British Gas, EDF, PG&E, and SoCal Tepco, plus strong relationships with key industry players
- DFM/DFT expertise
